

CloudPlatform Global Service Level Agreement (SLA)

Enterprise Master Services Agreement - Schedule 4.2 - Effective: October 2026

1.1 Scope and Objective

This Service Level Agreement ('SLA') defines the core operational availability standards, performance thresholds, and financial remedy commitments provided by CloudPlatform Inc. to enterprise customers utilizing our managed infrastructure. The commitments herein govern all production environments deployed within approved sovereign cloud zones, including North America, European Union, and Asia-Pacific multi-region clusters. Services are provisioned with automated health-check probes running at 10-second intervals.

1.2 Tiered Uptime Availability Commitments

CloudPlatform guarantees Monthly Uptime Percentage categorised across three distinct architectural service tiers: Tier 1 Mission-Critical Services: Encompasses Core API Gateways, Identity and Access Management (IAM) authentication engines, and Managed Distributed PostgreSQL transactional clusters. Tier 1 services maintain a guaranteed Monthly Uptime Percentage of not less than 99.995%. Tier 2 Standard Business Services: Encompasses Background Worker Queues, Distributed Caching (Redis), Batch Compute Pools, and Data Analytics Ingestion pipelines. Tier 2 services maintain a guaranteed Monthly Uptime Percentage of at least 99.90%. Tier 3 Non-Production Environments: Includes development sandboxes, staging clusters, and transient testing instances, maintaining an uptime commitment of 99.00%.

1.3 Downtime Calculation Methodology

Monthly Uptime Percentage is calculated as: $\text{Total Minutes in Month} - \text{Downtime Minutes}$, divided by $\text{Total Minutes in Month}$, multiplied by 100. Downtime is defined as any consecutive five-minute window during which customer client requests across two or more Availability Zones experience an automated HTTP 5xx server error rate exceeding 1.0%, or where TCP connection handshakes drop without acknowledgment. Intermittent packet loss isolated to specific single-instance containers does not constitute platform downtime.

1.4 Maintenance Windows and Notification Protocols

Scheduled Maintenance is conducted exclusively during designated low-traffic maintenance intervals (Saturdays 22:00 to Sundays 04:00 local datacenter time). CloudPlatform covenants to provide enterprise customers with at least 72 hours advance written notification via the CloudPlatform Status Dashboard and authenticated REST Webhook dispatch before executing any planned disruption exceeding 5 consecutive minutes. Emergency Security Hotfixes: In the event of a critical zero-day vulnerability (Common Vulnerability Scoring System CVSS v3 score ≥ 9.0), CloudPlatform reserves the right to apply non-deferrable patches with a minimum of two (2) hours advance notice.

CloudPlatform Global SLA (Service Credits & Penalties)

2.1 Service Credit Schedule for Tier 1 Outages

In the event CloudPlatform fails to satisfy the guaranteed Monthly Uptime Percentage for Tier 1 services, customer is entitled to liquidated Service Credits applied directly as monetary deductions against subsequent monthly invoices: (a) Availability below 99.995% but at or above 99.90% earns a 10% Service Credit calculated over total monthly fees for the affected service; (b) Availability below 99.90% but at or above 99.00% earns a 25% Service Credit; (c) Availability falling below 99.00% in any calendar month earns a 50% Service Credit. Service Credits are non-refundable cash equivalents and cannot be exchanged for cash or assigned to third parties.

2.2 Maximum Cumulative Penalty Cap

The aggregate maximum Service Credit payable to any single customer account in any individual billing month shall not exceed fifty percent (50%) of the total gross monthly charges billed for the affected services during the month of the incident. Service Credits represent the sole and exclusive financial remedy available to the customer for platform unavailability.

2.3 Mandatory SLA Claim Submission Procedure

To qualify for an eligible Service Credit, the customer's designated technical administrator must file a formal written claim through the CloudPlatform Enterprise Support Portal within thirty (30) calendar days from the conclusion of the billing cycle in which the outage occurred. Failure to submit within this 30-day window constitutes an irrevocable waiver of the claim. Each claim submission must mandatorily include: (1) Master Account UID; (2) Detailed Incident Support Ticket ID; (3) Exact UTC start and end timestamps; (4) Specific geographic cluster regions affected; and (5) Client-side server logs demonstrating systemic connection resets or HTTP 5xx responses.

2.4 Investigation and Adjudication SLA

CloudPlatform Security and Site Reliability Engineering (SRE) teams shall review and adjudicate all claims within fifteen (15) business days of receipt. Verified credits will be credited to the account on the immediate subsequent billing cycle invoice.

CloudPlatform Global SLA (Disaster Recovery & Exclusions)

3.1 Disaster Recovery Architecture and Objectives

CloudPlatform deploys multi-zone active-passive and active-active clustering across independent seismic zones. For all Tier 1 Mission-Critical transactional databases, CloudPlatform contractually commits to: Recovery Time Objective (RTO): A maximum allowable downtime of fifteen (15) minutes to restore full read/write operations following catastrophic datacenter failure. Recovery Point Objective (RPO): A maximum data loss window of five (5) seconds, accomplished via synchronous and asynchronous Write-Ahead Log (WAL) multi-region streaming replication. Automated failover triggers if primary zone heartbeat signals cease for more than 45 seconds.

3.2 Comprehensive SLA Exclusions

The availability commitments and credit remedies defined in this SLA do not apply to any downtime, suspension, or performance degradation resulting from: (a) Customer application-layer software bugs, unoptimized SQL queries, schema locking, or memory exhaustion within customer-managed containers; (b) Network partition events occurring outside CloudPlatform upstream transit providers (e.g., local ISP disruptions or corporate VPN gateway failures); (c) Volumetric Distributed Denial of Service (DDoS) attacks exceeding 500 Gbps, unless customer has actively enrolled in CloudPlatform Enterprise Shield; (d) Acts of God, civil unrest, armed conflict, severe solar electromagnetic geomagnetic storms, or subsea telecommunication cable severance; (e) Services marked as Private Preview, Public Alpha, Beta, or Early Access release candidates; (f) Suspension of services arising from non-payment or documented Acceptable Use Policy (AUP) violations.

3.3 Dispute Resolution and Governing Law

Any unresolved dispute concerning SLA calculations shall be submitted to binding technical arbitration in New Castle County, Delaware, before an independent accredited arbitrator certified by the American Arbitration Association (AAA).
